*** MMMonVHF Preview: Meteor Scatter in February & March 2011 **

In February and March, Sporadic Meteors reach their annual minimum
of activity; anyway, MS-DXing is still possible in 144 MHz,

especially in the morning and over distances close to optimal.
Only minor showers hit the Earthï¿½s atmosphere in February and
March. The most significant is Capricornids-Sagittariids, a daytime
shower, capable of providing fairly good meteor rates sometimes at
the end of January ï¿½ early February. Have a look to shower
predictions for February - March 2011 at www.mmmonvhf.de/ms.php
